PESTICIDES AND TOXIC
SUBSTANCES

MEMORANDUM

Subject: Ecological Effects Branch review of data requirements for
Dried Blood Case 4030, Chemical No.000611.

From: *James Akerman* James Akerman, Chief
Ecological Effects Branch
Environmental Fate and Effects Division (H7507C) *4/7/91*

To: Ernestine Dobbins, Chemical Review Manager
Accelerated Reregistration Branch, SRRD (H7508W)

The Ecological Effects Branch has reviewed the use of the biochemical, dried blood and it's present use patterns as a residential non-food repellent for use around ornamental plants, shrubs, and as a band treatment for lawns and turf. Given the very limited use pattern and the fact that the compound is a naturally occurring biological component it is not felt that wildlife toxicity testing requirements would be justified. The Branch therefore supports waivers for 71-1, 71-2, 72-1, and 71-2 testing requirements. Further questions regarding this matter may be directed to Brian Montague of our Branch at 557-2438.
